SYNCHRONIZE LANDPARK USER DATABASE WITH ACTIVE DIRECTORY OR OPENLDAP

Landpark Active Directory / OpenLDAP makes it possible to view, filter, and publish changes that have occurred since the previous synchronization

- Filter by change: view and add any newly created users or remove any users that are no longer in your Active Directory.
- Filter by user: this option makes it possible to filter your list by user and publish all user changes.
- Filter by period: filter your list by date interval or select a preset period.
- Landpark Active Directory enables you to automatically and seamlessly integrate your user data into Landpark thanks to a treeview structure that displays organisational and location-based information.
- Possibility of setting up 3 different connection profiles.
