#### ► A user-friendly interface with graphical views of your IT assets:

- Comprehensive management of your IT assets,
- Multi-site/multi-company management,
- High-level views of your IT assets (geographical organizational network) using "Treeview" components,
- Treeview-based site management,
- User directory service by department and company
- Assign users to hardware, software, tickets,
- User-friendly interface,
- Immediate and easy access to information and features.

#### ► Quickly manage your IT assets and Non-IT assets via a context-sensitive toolbar:

Whatever asset type is selected (computer, printer software, network element, network card, hard disk device, monitor, etc), you can manage all of the following:

- Purchase settings,
- Guarantees,
- Maintenance, Insurance, Subscription contracts,
- Ticket creation on currently selected item,
- Depreciation calculation,
- Budget line allocation,
- Loans, etc.

#### ► High availability of information on each of your assets:

- Whatever asset is selected (computer, printer, software, network element network card, hard disk drive device, monitor, etc ..), information can be quickly retrieved,
- Item move history,
- Full summary of all topics related to the item (technical, contract, assignments, tickets, etc ),
- Item location,
- Remote control,
- Duplicate items automatically,
- Print out a complete signable summary that describes currently allocated hardware.

### The complete management cycle of your IT assets

Automated Inventory Tracking Tools

Complete Management of your IT assets

Software License Management

Helpdesk/Assistance

#### ► Managing the move history of your equipment:

- Whatever item is selected (computer, printer, software, network element, network card, hard disk, device, monitor, etc.), each item has a move history that includes move dates, original state and destination state, who is responsible for the move, ...
- Move history and items by location, etc.

#### ► Managing your users:

- User list imported from Active Directory / OpenLDAP or from an Excel spreadsheet with full details
- PCs associated with users,
- Non-IT items associated with users,
- Printers associated with users, etc.

#### ► How to import your user list:

- Users are imported from Active Directory / OpenLDAP or from an Excel spreadsheet.

#### ► PCs associated with users:

- Assigning a user to a PC or other items can be done manually by choosing his/her name in the user list,
- You can also automatically assign users to PCs based on the login name retrieved from the user record and the login name found during the inventory phase,
- User-assignment history on a PC,
- Item list by user,
- Signable assignment sheets, etc.

#### ► Managing your software licenses:

- Software list by location and family, ID, number of detected licenses, number of purchased licenses,
- To open a software item, assign a license number to the PC where the license is installed, insert its license type and the number of times the license key needs to be duplicated in order to transfer the license to another PC,
- Create alerts on unwanted software or unlicensed software,
- Quickly identify which PCs have unwanted or unlicensed software,
- PC list associated with software licenses, etc.

#### ► Modify the software reference list, add your own applications or detect unwanted software:

- Software reference list, add your in-house applications (exe, dll, \*.\*),
- Mark software products or file extensions as unwanted and detectable by alerts,
- Find any application that isn't registered in your software reference list.

Control, manage and maximize  
your company's IT assets
