

**IT ASSETS MANAGEMENT
WITH LANDPARK**

For a better management of your IT assets

Success of your projects

Within the framework of this strategy, the success of your projects depends largely on quality tools allowing you a quick return on your investments and a better profit of productivity. Projects of asset management the most succeeded follow a planning of progressive deployment.

Cost

All the activities relating to your assets management have a cost. Data processing is subjected to a short cycle of technological development. The acquisition cost of your workstations represents more than 50% of the total cost in computer equipment - without speaking about the maintenance and support cost. An accurate check of this kind of costs is thus essential.

Experience

Our experience on a great number of projects indicates that the most successful companies consider asset management as a full strategy aiming to reduce the total cost inherent in the exploitation of their entire data-processing assets.

Advantages

Landpark Helpdesk is at the core of your asset management. Using asset management software presents many advantages. A great number of companies is aware that technological tools - allowing a global vision of computer equipment - are essential to solve overall the totality of support, maintenance and acquisition costs.

TCO

The Total Cost of Ownership - TCO - summarizes perfectly the problems of maintenance. The purchase price becomes often secondary compared to the exploitation cost (a PC can return five times more expensive to maintain than to buy). As soon as your company approaches about fifty computers, a precise assets management software becomes essential.

You should define precisely your objectives and analyse your needs

Results

From inventorying all your equipments to a complete asset management: movements, licenses management, contracts management, purchases management without forgetting the installation of a service desk the goal is not only to reduce your management costs but also to generate quickly significant results in term of users support.

Budget

The limit of a data-processing budget is often difficult to establish. For better knowing this budget, it is necessary for you to count and organize all the events of the cycle of life of your computer equipment.

Methodology

Your data processing systems are increasing, the volume of information to be organized becomes important. Your company needs a methodology and processes for better managing it. This requirement goes through by the use of computerized tools able to save you time.

Know better your data-processing system before organizing it

Check your license agreements

In your budget, the line “licenses software” becomes increasingly important. In addition, setting in conformity of your software license agreements will enable you to avoid legal nuisances. Our inventory and asset management tools can help you to compare previous inventories, to locate “wild installations” (software downloaded or installed from a personal CD-Rom).

Identify all your guarantee and maintenance contracts

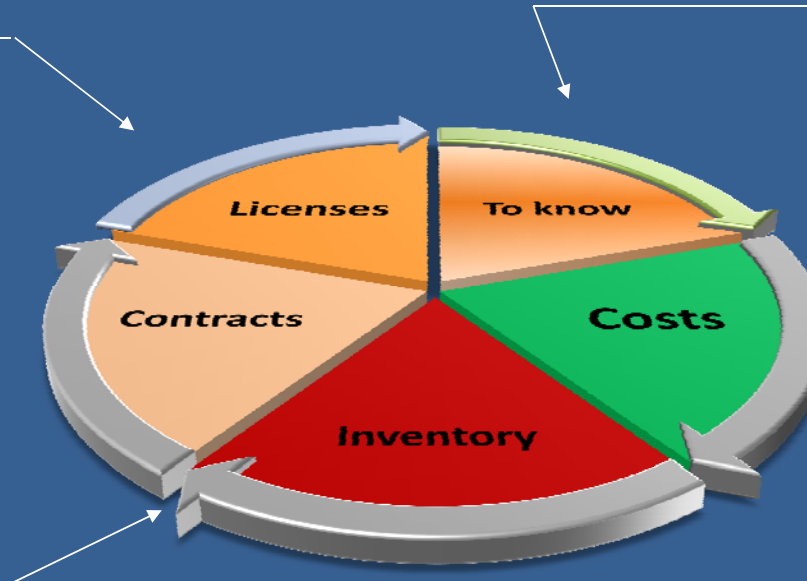

All the computer activities of your company must be harmonized and managed by precise rules. The references and characteristics of your contracts (material, software etc) - must be listed and organized in order to make quickly the good decision when a material breaks down.

To know your data-processing system before

It is necessary for you to know better your data-processing system before organizing it : some rules through our experience can be used as examples and help you in a strategy according to the needs for your company.

Evaluate precisely the cost

To know exactly how much costs each workstation, the cost of renewal for material, software and subcontracting.

Carry out a precise inventory of your data-processing systems

The inventory often requires working hours: to automate allows a considerable saving of time. To carry out a precise inventory (configurations, hardware, software, etc) and network equipments, using an automated inventory software tool is essential. Our tools will give you an automatic report on what is on place. Installed on a Server, our software scans all your workstations connected to the network and records all information relating to their configuration.

Join together other services concerned by the management and technical support of your assets

Valorisation

Facilities department or the Industrial department of your company may need to manage others objects and to have a service desk to manage its equipment and services independently.

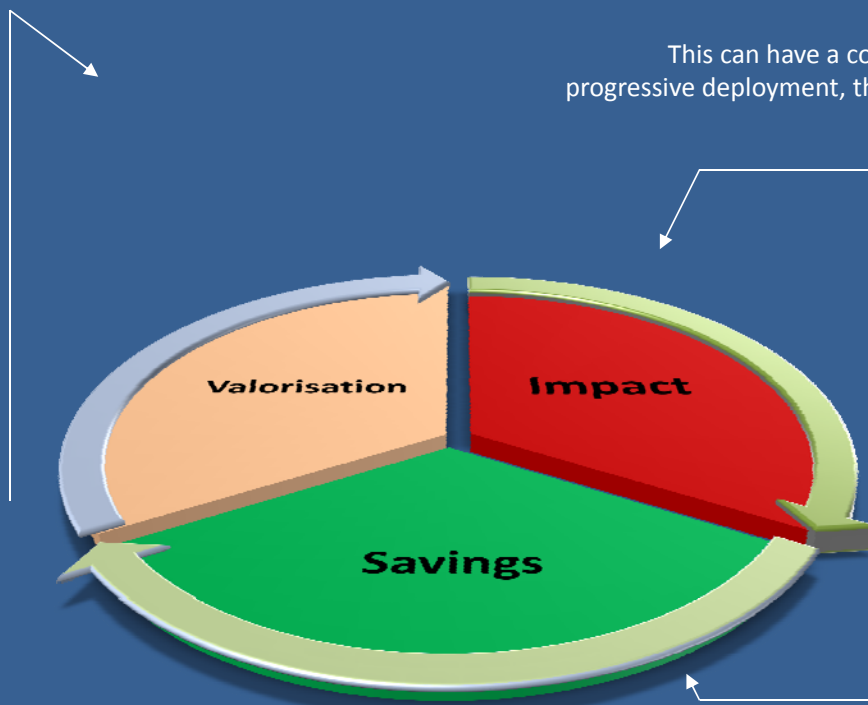

Each phase of the deployment can then be based on competences of these various teams in order to save time and to allow a better valorization of your activities.

Impact

This can have a considerable impact on the cost of the project. Around a planning of progressive deployment, the installation of an asset management and a service desk solution probably implies other departments.

Savings

All others services of your company - management - accountancy - administration - are concerned with the savings made thanks to effective assets management software.

Choose the best adapted tools

Anticipate the strategy of your company

Your results associated with effective tools will enable you to imply yourselves more on the level of the strategy of your company by anticipating its needs.

Solutions adapted to answer your needs

Why take the decision to develop your own software, by definition, long and expensive - solutions are now adapted to answer your needs. Landpark tools profit from a long experience - their implementation is perfectly adapted to the environment of your company.

Competences

The profile of our competences is determining for the success of your project. Our consultants have a solid training as well as an excellent experience of the deployments.

Experience

Within the framework of a rigorous methodology and being based on our experience, our teams take into account each one of your specificities. Our solutions present several modular tools to answer each one of your needs: inventory assets management, helpdesk, etc...

LANDPARK LICENSES

1. Asset tracking

■ **Landpark Inventory**

2. Snmp inventory

■ **Landpark Snmp**

3. IT Asset management

■ **Landpark Manager**

4. Active Directory/OpenLDAP

■ **Landpark Active Directory**

5. Issue tracking / Service Desk

■ **Landpark Helpdesk**

A PROJECT APPROACH TO HELP YOU

LANDPARK

A comprehensive Client
Support Program

1

Treat each and every customer as unique

2

Provide them with our unique technical expertise and knowledge

3

Address their requirements and validate their expectations through our benchmarks

4

Landpark offers first-rate technical support in order to meet your operational needs

Landpark provides the kind of technical support that will help
your organization address the most complex operational requirements

BENEFITS WITH OVERS 700,000 INSTALLED LICENSES

1

TECHNOLOGY

AN EXPERIENCE FOR OVER 20 YEARS

2

CUSTOMERS

OVER 700,000 INSTALLED LICENSES

3

LICENSES

AFFORDABLE PRICES

4

BENEFITS

With an expertise and a know-how recognized by thousands of accounts the quality of our Landpark tools allows IT managers the most exhaustive and precise vision for their data-processing needs
